(Los subtítulos serán mostrados al iniciar la reproducción del video.)

[music] Let's introduce lab two. Now lab two is gonna build on what we've already done

with lab one we're just gonna add on a little bit of additional functionality

In particular what we now wanted to do is add an attribute to allow for a web

developer to go in and choose what the maximum rating can be. So maybe you'll

## Module 2

For module two, you will enhance the interface for your review widget. The updated interface must meet the following goals

- Provide a configurable number of circles for the user to click on. This can be accomplished by adding a custom attribute to the outer **div** element that contains the circles.
- Allow the number of circles to be updated by a textbox. This is to simulate an administration widget; we will **not** be adding any form of security to the widget.
- The existing functionality of hovering and selection must still work.

The starting ratings widget will have 5 circles.

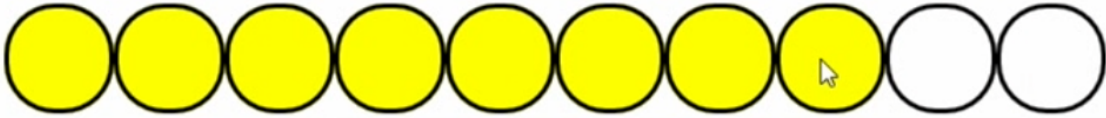

### Rate this session

Enter max value:

When a user enters a new value into the textbox, the number of circles must contain the number provided.

## Rate this session

Enter max value:

Update max value

**Tip:** Delegate, which we talked about previously, does not support the **hover** event.
