

El acceso de auditoría vence el 11 de feb. de 2019

Perderás el acceso a este curso, incluido tu progreso, el 11 de feb. de 2019.

Opta por el certificado verificado antes del 31 de mar. de 2019 para obtener acceso ilimitado al curso mientras esté disponible en nuestro sitio. **[Opta ahora](#)**

Overall lab instructions

Lab Notes

Labs are designed to both be a challenge as well as real-world. As a result, full step-by-step instructions are not provided. However, all of the needed information, class names, and resources to complete the labs have been provided. You can find the necessary content in either the videos or the text. Each lab will have a couple of hints as well.

If you do get stuck you are free to discuss the lab with both myself and other students.

Keep in mind that future labs will continue to build on this one. Successful completion of the labs will require completing the labs from the module prior.

Lab Steps

Each lab will provide various resources. As you attempt the lab, try to solve the lab by using the earliest step possible. Here are the resources provided for this lab:

1. **Text description and screenshots.** Each lab will have a section describing the goal of the lab, as well as screenshots to help guide you through the lab.
2. **Video description.** Each lab will have a video describing the lab and demonstrating the solution.
3. **Starter code.** You will be provided with HTML which will serve as the basis for starting the lab. You are free to modify this HTML as you see fit, however **this is not**

required; the lab can be completed successfully with JavaScript and jQuery code alone.

Lab scenario

Through a series of labs, you will build an interface to allow a user to submit a review. The interface must allow the user to mouse over their rating and see a reflection of what that rating will be. In addition, you will both store the rating and eventually submit their rating to a server.

Each module's lab will add features to this project, so by the end of the course you will have a fully functional widget.
